

Bondstrand® 2000M/7000M Glassfiber Reinforced Epoxy (GRE) pipe systems for marine service with external pressure requirements

Uses and applications

- Ballast
- Chlorination
- Draining
- Cargo line
- Sanitary service & sewage
- Portable discharge line
- Stripping lines
- Tankcleaning (salt water)
- Fire protection mains
- Various other applications

A complete library of Bondstrand pipe and fittings in PDS and PDMS-format is available on CD-ROM. Please contact Ameron for details.

For specific fire protection requirements, an outer layer of passive fire protection is available.

For pipe systems without external pressure requirements, please refer to Bondstrand 3400 product data (FP 835) or contact your Ameron representative.

Approvals

In 1993, IMO (International Maritime Organisation) issued a resolution (A.18/Res. 753) covering acceptance criteria for assuring ship safety. Major certifying bodies have adopted and implemented these Guidelines in their respective Rules and Regulations for the Classification of Ships.

All Bondstrand pipe series used in the marine industry are designed and type-approved by the below major certifying bodies. (A complete list is available, on request)

- American Bureau of Shipping (ABS), U.S.A.;
- Bureau Veritas, France;
- Det Norske Veritas, Norway;
- Germanischer Lloyd, Germany;
- Lloyd's Register, United Kingdom;
- Nippon Kaiji Kyokai, Japan;
- Registro Italiano Navale (RINA), Italy;
- United States Coast Guard (USCG), U.S.A..

Characteristics

Maximum operating temperature: up to 121°C.

Pipe diameter: 1-40 inch (25-1000 mm).

Pipe system design for pressure ratings up to 16 bar.

ASTM D-2992 Hydrostatic Design Basis (Procedure B - service factor 0.5);

ASTM D-1599 Safety factor of 4:1. Design criteria for external pressure requirements are in accordance with IMO regulations.

Bondstrand 2000M

ASTM D-2310 Classification: RTRP-11FW for static hydrostatic design basis; MDA cured.

ASTM D-2310 Classification: RTRP-11FX for static hydrostatic design basis; IPD cured.

Complies with ASTM F-1173 Classification.

Bondstrand 7000M

ASTM D-2310 Classification: RTRP-11AW for static hydrostatic design basis; MDA cured.

ASTM D-2310 Classification: RTRP-11AX for static hydrostatic design basis; IPD cured.

Complies with ASTM F-1173 Classification.

Pipe series

Pipe

Filament-wound Glassfiber Reinforced Epoxy (GRE) pipe for Bondstrand adhesive-bonding systems. MDA (diaminodiphenylmethane) or IPD (isophoronediamine) cured.

Fittings

A wide range of lined filament-wound Glassfiber Reinforced Epoxy (GRE) fittings for Bondstrand adhesive-bonding systems. For special fittings, not listed in this product guide, please contact your Ameron representative.

Flanges

Filament-wound Glassfiber Reinforced Epoxy (GRE) heavy-duty flanges, hubbed and stub-end flanges for Quick-Lock adhesive bonding systems. Standard flange drilling patterns as per ANSI B16.5 (150 Lb). Other flange drilling patterns, such as ANSI B16.5 (> 150 Lb), DIN, ISO and JIS are also available.

Bondstrand® 2000M

Glassfiber Reinforced Epoxy (GRE) pipe system; IPD or MDA cured.
Standard 0.5 mm internal resin-rich reinforced liner.
Maximum operating temperature: 121°C for MDA cured and 93°C for IPD cured.
Maximum pressure rating: 16 bar.
Minimum pressure: full vacuum.
External Pressure Requirements: In accordance with IMO Regulations.

Bondstrand® 7000M (* conductive)

Glassfiber Reinforced Epoxy (GRE) pipe system; IPD or MDA cured.
Maximum operating temperature: 121°C for MDA cured and 93°C for IPD cured.
Maximum pressure rating: 16 bar.
Minimum pressure: full vacuum.
External Pressure Requirements: In accordance with IMO Regulations.

*** Conductive**

Our conductive pipe systems have been developed to prevent accumulation of potentially dangerous levels of static electrical charges. Pipe, fittings and flanges contain high strength conductive filaments. Together with a conductive adhesive this provides an electrically continuous system.

Joining system & configuration

Pipe

25-400 mm (1-16 inch):

Quick-Lock (straight/taper) adhesive joint with integral pipe stop in bell end.
End configuration: Integral Quick-Lock bell end x shaved straight spigot.

450-1000 mm (18-40 inch):

Taper/Taper adhesive joint.
End configuration: Integral Taper bell x shaved taper spigot

Fitting

25-400 mm (1-16 inch):

Quick-Lock (straight/ taper) adhesive joint with integral pipe stop in bell end.
End configuration: Integral Quick-Lock bell ends.

450-1000 mm (18-40 inch):

Taper/Taper adhesive joint.
End configuration: Integral Taper bell ends.

Flanges

25-1000 mm (1-40 inch):

Quick-Lock (straight/ taper) adhesive joint with integral pipe stop in bell end.
End configuration: Integral Quick-Lock bell end.

Note: * Pipe nipples, saddles and flanged fittings have different end configurations.

Note: Other drillings may be possible. Please consult Ameron.

- 1) Full-face elastomeric gaskets may be used suitable for the service pressure, service temperature and fluid. Shore A durometer hardness of 60 +5 is recommended (3 mm thick). Compressed fibre gaskets (3 mm thick), compatible with pressure, temperature and medium may also be used.
Mechanical properties should be in accordance with DIN 3754 (IT 400) or equal.
- 2) For maximum bolt torque refer to the appropriate Bondstrand literature.
A torque-wrench must be used, since excessive torque may result in flange damage.
- 3) Size 18-40 inch can be bonded directly to a fitting by using a Quick-Lock to Taper/Taper transition nipple. For bonding to pipe, a Quick Lock (straight) spigot has to be shaved on the pipe.

Note: Up to 12 bar flat faced stub-ends suitable for elastomeric gaskets can be used.

From 12 bar and above O-ring sealed stub-ends should be used.

Make sure that when using O-ring sealed stub-end, its counter flange is compatible, e.g. use a flat faced stub-end (without O-ring groove) or another flat surface flange as counter flange.

Notes:

- 1) Filament-wound support saddles are intended for protection of pipe at supports and clamps, as well as for anchoring purposes. Support and anchor saddles are standard 180°. Saddles are supplied in standard lengths of 100 mm and 150 mm.
- 2) For special saddle -lengths, -thickness and/or angles consult Ameron.
- 3) Wear saddles are standard 90°. Weights of 90° degree saddles are 50% of value shown.

Grounding Saddles

Filament-wound pipe saddles for grounding in conductive piping systems.

Notes:

- 1) Adhesive Kits should never be split. If remainder is not used for other joints made at the same time, the surplus must be discarded.
- 2) Required adhesive for saddles is shown in the dimension table of the respective saddles.
- 3) For type of adhesive to be used, please refer to the Bondstrand® Corrosion Guide.

Engineering design & installation

Consult the following literature for recommendations pertaining design, installation and use of Bondstrand pipe, fittings and flanges:

Please consult Ameron for the latest version of the above mentioned literature.

Specials

Note: Elbows with non-standard angles, non-standard drilled flanges, multi branch tees and special spools are available on request, please consult Ameron.

Field testing

Pipe system is designed for hydrostatic testing with water at 150% of rated pressure.

Surge pressure

Maximum allowable surge pressure is max. 150% of rated pressure.
