

Regasketing

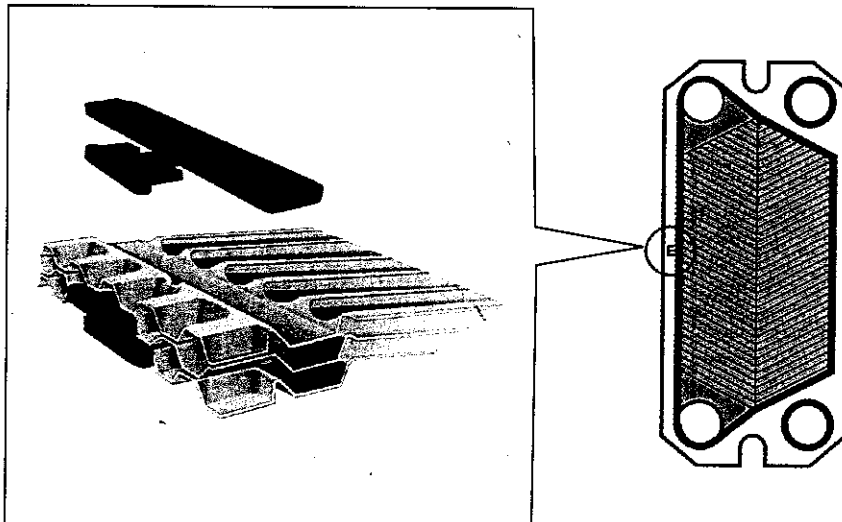

- 1 Open the plate heat exchanger according to page 8, and remove the plate that is to have a new gasket.

Glued gaskets

Separate gluing instructions will be delivered together with the glue.

- 2 Remove the old gasket.

- 3 Attach the clip-on gasket to the plate. Slip the gasket prongs under the edge of the plate.

Note!

Make sure the two gasket prongs are in correct position.

- 4 Proceed with the next plate to be regasketed until all plates in need of regasketing are done with.

- 5 Close the plate heat exchanger according to page 12.
