## Most probably ...the best in the world KME Products for Offshore and Shipbuilding

Do you still use heavy carbon steel pipes for seawater carrying systems, still use chlorination or painting to prevent marine growth?

*Why not use CuNi 90/10 tubes, KME trademark OSNA®-10? Save up to 50% weight of the piping system and any costly protection!*

Do you still use old fashioned singular tubes for hydraulic and pneumatic remote control systems?

*Why not use OSNALINE® tube bundles which are easily and quickly laid like an energy cable, supplied in very long units and tailor-made to customer's specifications?*
