# CHANGES IN THE RULES

## General

This booklet is a reprint of the previous edition and apart from clarifications of text and the inclusion of amendments and corrections, published in the July 2002 edition of Pt.0 Ch.1 Sec.3, no other changes have been made.

This chapter is valid until superseded by a revised chapter. Supplements will not be issued except for an updated list of minor amendments and corrections presented in Pt.0 Ch.1 Sec.3. Pt.0 Ch.1 is normally revised in January and July each year.

Revised chapters will be forwarded to all subscribers to the rules. Buyers of reprints are advised to check the updated list of rule chapters printed in Pt.0 Ch.1 Sec.1 to ensure that the chapter is current.

Comments to the rules may be sent by e-mail to [rules@dnv.com](mailto:rules@dnv.com)

## SECTION 1 GENERAL REQUIREMENTS

### A. Classification

#### A 100 Application

**101** The Rules in this chapter apply to cargo handling systems, cargo related systems and ballast systems in the cargo area arranged for centralised operation and surveillance.

**102** The Rules in this chapter are applicable to vessels assigned one of the following class notations:

- **Tanker for Chemicals**
- **Tanker for Oil Products**
- **Tanker for Oil.**

#### A 200 Class notation

**201** Vessels having their cargo systems and ballast systems built and equipped, surveyed and tested in accordance with the requirements of this chapter, may be given the additional class notation **CCO**.

### B. Documentation

#### B 100 Plans and particulars

**101** The following plans and particulars are to be submitted for approval:

- arrangement of control room
- schematic diagrams showing arrangements for segregation of piping systems for various cargo loading and operational modes
- functional description of remotely controlled operations and monitoring systems
- operational procedures including emergency procedures
- description of the information systems, including user interface, logic diagrams, extent of available information, procedure for updating stored information and as applicable, interface to other instrumentation.

## SECTION 2

### ARRANGEMENTS FOR CENTRALISED OPERATION AND SURVEILLANCE

#### A. General

##### A 100 Extent of remote control and surveillance

**101** All main operations related to cargo loading and discharging, ballasting and de-ballasting are to be arranged for centralised operation from a cargo control room.

Preparatory tasks as starting machinery, connecting loading hoses, opening of cargo manifold valves may be arranged for local control only.

Similarly, tasks to be carried out after loading/unloading is ended may be arranged for local control only.

Table A1 lists operations required to be arranged for remote control. Other solutions will be accepted if same level of operation safety is maintained.

**102** Indication of parameters necessary for control and supervision of cargo handling and ballasting operations is to be provided in the cargo control room. For critical parameters alarm monitoring is to be provided.

##### A 200 Cargo control room

**201** Controls and indications as given in 100 are to be located in a cargo control room fitted with air condition capable of maintaining a temperature between 20°C and 30°C.

**202** The cargo control room is to be so located and arranged that direct visual surveillance of the cargo loading and discharge manifold area is possible.

**203** Cargo control rooms located within the cargo area are to have boundaries insulated to «A-60» standard. The entrance(s) is to be located and arranged with a view to safest possible escape in a case of emergency. Three sets of emergency escape masks (breathing apparatuses) and protective clothing are to be stored in the cargo control room.

#### B. Arrangement of Piping Systems

##### B 100 General

**101** The Rules of Pt.5 Ch.3 and Pt.5 Ch.4 apply in general for oil carriers or chemical carriers respectively.

##### B 200 Cargo tank cleaning

**201** Tank cleaning machines are to be permanently installed.

**202** Portable means (e.g. short hoses) for connecting individual machines to the tank washing main line may be accepted.

**203** In the case of particular cargoes requiring extraordinary high cleanliness standards for commercial reasons, additional portable washing machines may be used.

##### B 300 Cargo tank gasfreeing

**301** A fixed cargo tank gasfreeing system is to be fitted.

**302** Portable means for connecting the inlet to cargo tanks to the supply main, e.g. by means of short hoses, may be accepted provided such connecting may easily be performed by one person only.

**303** For smaller vessels the use of portable ventilation fans may be accepted provided the arrangement facilitates easy and quick connecting.

##### B 400 Segregation of piping systems

**401** Segregation of cargo systems required for incompatible cargoes or between cargo systems and other systems required for safety purposes is to be achieved by means of separate piping systems. For tank cleaning systems, inert gas systems and gasfreeing/dry air systems, segregations by means of portable pipe sections or short lengths of hoses may be accepted.

Table A1 Remotely controlled operations	
Operation	Comments
Starting/stopping of cargo pumps and operation of valves	Manual start of cargo pumps in case of pump room cargo system may be accepted
Remote operation of valves in loading/unloading system	Cargo manifold valves are to be manually operable locally independent of any remote control
Cargo tank washing operations	Connecting of water supply may be carried out locally
Inerting	Connecting of actual tank(s) to i.g. main may be done locally
Ballasting/de-ballasting	
Bilge drainage for cargo pump room	
Fire extinguishing for cargo pump room	
Start of fire pump and start of cargo deck foam extinguishing system and water spray system (if provided)	

#### C. Monitoring and Remote Control Systems

##### C 100 General

**101** The Rules in Pt.4 Ch.9 apply in general. In the case of computer based systems the requirements contained in Pt.4 Ch.9 Sec.4 are to be complied with.

**102** Means for local manual operation of valves and machinery in the event of failure of the remote control system are to be provided.

##### C 200 Alarm and remote reading

**201** The extent of alarm and indication are to be according to Table C1 as applicable.

##### C 300 Emergency stop/shut down arrangements

**301** Arrangement for emergency stop of cargo pumps from the cargo loading/unloading manifold area is to be fitted.

**302** Arrangements for emergency closing of valves in the cargo loading lines are to be fitted in cargo control room and at the loading manifolds.

##### C 400 Cargo tanks secondary ullaging system

**401** In addition to the remote ullaging system required by Table C1, arrangements for closed type ullaging by means of portable equipment are to be provided. At least two sets of portable ullaging equipment are to be kept onboard

<b>Table C1 Extent of alarm and indication</b>				
<i>Parameter</i>	<i>Remote reading</i>	<i>Alarm</i>		<i>Comments</i>
		<i>Low</i>	<i>High</i>	
Cargo tank level	x		x	For carriage of certain chemicals an additional high-high level alarm is required
Ballast tank level	x			
Cargo temperature	x			Only for tanks with heating or cooling systems
Cargo tank ullage pressure	x	x	x	For each segregation
Cargo pressure at loading manifold	x			
Cargo pressure at pump discharge	x		x	
Cargo pump rpm	x			Not for constant speed electrically driven pumps. Alternative parameters for hydraulically driven pumps may be considered
Cargo pump housing, cargo pump shaft bearing and bulkhead shaft seal temperatures			x	Not for submerged pumps
Hydraulic and pneumatic power supply	x	x		Supply for hydraulic pump motors, cargo line stripping, valve operation etc.
Inert gas generator				Monitoring as required by Pt.5 Ch.3 Sec.11
Tank washing medium supply pressure	x	x		
Valve's positions				Open/shut indications
Status of pumps and other machinery				Running/stop indications
Oil content of wash-water discharge			x	Automatic changeover to recirculation
Bilge level in cargo pump room			x	
Explosive gas concentration in cargo pump room			x	

## SECTION 3 INFORMATION SYSTEM

### A. General.

#### A 100 Information retrieval and presentation.

**101** An information system is to be provided which will enable the operation to easily retrieve and display all information needed for observing limitations and operational requirements set forth by rules and regulations for particular cargo operations.

#### A 200 Extent of information.

**201** The information system is to contain the following information as applicable:

- physical data of the product
- pollution categorization of the product
- toxicity information
- carriage requirements and limitations stipulated by certificate
- special operational requirements mandatory for particular cargoes
- mandatory tank washing procedures, general procedures (e.g. cow or prewash for category A chemicals) and specific procedures for particular products
- cargo tank and cargo lines' stripping procedures
- cargo heating requirements/limitations
- discharge procedures for cargo tank washwater
- ship and cargo tank certification data.

**202** It is recommended that information additional to that listed in 201, which may assist the operator in performing the actual operations in an efficient and correct manner be included. E.g. information such as:

- cargo tank coating compatibility guide
- recommended tank washing procedures for particular products
- synonym names/trade names' interpreter
- rules, regulations and industry standards' references for particular products.

#### A 300 Verification of loading conditions.

**301** The information system is to enable easy checking of any loading condition and combination of products loaded or planned to be loaded with respect to strength of hull and cargo tanks and to present actual cargo tank filling limits (if any).

**302** The information system is to enable easy checking of any planned loading for compatibility requirements and to provide information of any required piping segregations to be executed.

**303** The information system is to enable easy checking of any planned loading conditions against applicable damage stability requirements (MARPOL Annex I and IBC- Code).

#### Guidance note:

- a) Appendix A contains compatibility guidelines for groups of products.
- b) It is anticipated that a computer installation will be necessary for fulfilling required functions of the information system in the case of the most sophisticated tankers (parcel chemical tankers and multi purpose product oil tankers).

For simpler single grade cargo tankers other solutions may suffice.

## APPENDIX A COMPATIBILITY GUIDE

### A. General.

#### A 100 Definition of hazardous reaction.

**101** As a first approximation, a mixture of two cargoes is considered hazardous when, under specified condition, the temperature rise of the mixture exceeds 25°C or a gas is evolved. It is possible for the reaction of two cargoes to produce a product that is significantly more flammable or toxic than the original cargoes even though the reaction is non-hazardous from temperature or pressure considerations, although no examples of such a reaction are known at this time.

#### A 200 Chart format

**201** There are different degrees of reactivity among the various cargoes. Many of them are relatively non-reactive: for example, aromatic hydrocarbons or paraffins.

Others will form hazardous combinations with many groups: for example, the in-organic acids.

The cargo groups in the compatibility chart (see fig. 1) are separated into two categories: 1 through 22 are «Reactive Groups» and 30 through 43 are «Cargo Groups». Left unassigned and available for future expansion are groups 23 through 29 and those past 43. Reactive Groups contain products which are chemically the most reactive; dangerous combinations may result between members of different Reactive Groups and between members of Reactive Groups and Cargo Groups. Products assigned to Cargo Groups, however, are much less reactive; dangerous combinations involving these can be formed only with members of certain Reactive Groups. Cargo Groups do not react hazariously with one another.

### B. Application of the Compatibility Chart.

#### B 100 Procedure.

**101** The following procedure explains how the compatibility chart should be used to find compatibility information:

- 1) Determine the group numbers of the two cargoes by referring to the alphabetical listing of cargoes and the corresponding groups (Table I). Many cargoes are listed under their parent names; unless otherwise indicated, isomers or mixtures of isomers of a particular cargo are assigned to the same group. For example, to find the group number for Isobutyl Alcohol, look under the parent name Butyl Alcohol. Similarly, the group number for para-Xylene is found under the entry Xylene.
- 2) If both group numbers are between 30 and 43 inclusive, the products are compatible and the chart need not be used.
- 3) If both group numbers do not fall between 30 and 43 inclusive, locate one of the numbers on the left of the chart (Cargo Groups) and the other across the top (Reactive Groups). (Note that if a group number is between 30 and 43, it can only be found on the left side of the chart.) The box formed by the intersection of the column and row containing the two numbers will contain one of the following:
  - i) blank—The two cargoes are compatible
  - ii) «X»—The two cargoes are not compatible
  - iii) a letter other than «X»—Reactivity varies among the group members. Refer to the footnotes following the chart to find whether the products in question are included in the footnotes. Unless the combination is specifically mentioned in these footnotes, it is compatible.

TABLE II — GROUPINGS OF CARGOES

1. *Non-Oxidizing Mineral Acids*

Hydrochloric Acid  
Hydrofluoric Acid  
Hydrofluorosilicic Acid  
Phosphoric Acid

2. *Sulfuric Acids*

Spent Sulfuric Acid  
Sulfuric Acid (98% or less)

3. *Nitric Acid*

Nitric Acid (70% or less)

4. *Organic Acids*

Acetic Acid  
Acrylic Acid (inhibited)  
Butyric Acid  
Cashew Nut Shell Oil (untreated)  
Dichloropropionic Acid, 2,2-  
Dimethyloctanoic Acid, 2,2-  
Ethylhexoic Acid, 2-  
Formic Acid  
Heptanoic Acid (n-)  
Methacrylic Acid  
Naphthenic Acid  
Oleic Acid  
Propionic Acid  
Stearic Acid

5. *Caustics*

Caustic Potash Solution  
Caustic Soda Solution  
Cresylate Spent Caustic Solution  
Sodium Borohydride Solution ( 15% or less)  
Sodium Hydroxide Solution  
Sodium Carbonate Solutions  
Sodium Cyanide Solution (30% or less)  
Sodium Hydrosulfide Solution (45% or less)  
Sodium Hypochlorite Solution (15% or less)

6. *Ammonia*

Ammonia, Anhydrous  
Ammonium Hydroxide (28% or less)  
Ammonium Nitrate, Urea, Water Solutions (contain-  
ing Ammonia)

7. *Aliphatic Amines*
